Puzzleclamp system

The puzzleclamp system was designed to achieve an optimized 2-bolt front clamp fixation on our stems. The puzzle design reduces the stress on the bolts and handlebar and increases rigidity and durability, thanks to the front clamp's optimized position.

Star-Series item

Items developed in close cooperation with our sponsored professional riders.

Head-Lock

The Head-Lock system was designed to achieve an optimized 4-bolt front clamp fixation. It closes the gap between the top of the front clamp and the full carbon stem body. The design reduces the stress on the bolts and handlebar and increases rigidity and durability, thanks to an optimized position of the front clamp.

Full oversized

Handlebars with a full, oversized grip section. This increases their rigidity and gives the rider a firm and solid grip.

Rib reinforcement

The handlebar tube features internal reinforcement ribs. This results in very stiff handlebars that are optimized to sustain the enormous forces applied to them during top-speed sprints.

Super stiff

The design of these items ensures that they offer optimum rigidity.

Wedgeclamp system

Seatpost and saddle are connected through a clamping system that uses an innovative wedgeclamp construction. Its design ensures that there is no stress on the bolt(s). The system makes a multi-adjustable set-up possible.

2x2 Twill Weave carbon

The carbon fibers have an advanced 'two over, two under' weave pattern.

Smart Silicone

Thanks to the smart use of silicone the handlebar tape can be removed easily. At the same time, its adhesive characteristics are strong enough to ensure that the tape will stay properly fixed on the handlebar as long as is necessary.

Magnet lock system

An innovative lock system with an internal magnet makes sure that the pump handle will remain closed when you don't use the pump.

Integrated expander

An internal expander system is integrated within the grip. This ensures an effective and clean-looking attachment to the handlebars.

Internal cable routing

Integrated brake- and shift-cable routing for optimal aerodynamics and optics.

Twistlock

An innovative and easy-to-operate clamping system for your aerobar extensions. It allows you to adjust their position in various ways.

Inside Flat Sections

Internal reinforcements over the full length of carbon seat posts. They are positioned on the front and the rearside, to strengthen the entire construction. In tests, carbon tubes with this feature are able to resist forces that are 50% above the EN standard.

Multi-adjustable

A wide range of adjustability to ensure that riders can optimally adapt the ergonomic and aerodynamic position to their specific needs.

Anatomic Fit

Anatomic fit for optimized pressure points.

Aero design

Wind tunnel tested aerodynamic design.

Bio degradable

This product is made out of materials that decompose in the natural environment.

Wireless

Wireless connection between sender and receiver.

Lightweight

Made from the lightest materials and engineered to have the lowest weight possible.

Flat saddle

Intermediate saddle

Round saddle

INTRODUCTION

PRO//CATALOGUE//2014

>At PRO we use the best people in the world to make the best products in the world. Our unique collaborative design process combines the expertise of professional cyclists and expert engineers to produce high-performance components that give winning racers the edge they need to keep winning. We call it "co-creation". Every discipline, from road racing to mountain biking, has its own requirements. We work with the best riders to pin down those requirements before using our unparalleled engineering and manufacturing expertise to meet them. Prototypes go back to the riders for real-world testing and feedback - nothing goes into production until both engineers and riders are satisfied.

For 2014 we have a number of new components. Our successful saddle range has been expanded, with new saddles for MTB and time trial/triathlon. Saddle development has benefitted from the wealth of data from Bikefitting.com, now owned by Shimano. We've also added two women's saddles so that everyone can benefit from a PRO saddle regardless of gender or discipline.

With the growing popularity of Di2 electronic transmission, we've worked closely with Shimano engineers on integrating Di2 into PRO components. We have seatposts designed to contain a Di2 battery, protecting it from the elements and giving a sleek look. And our all-new SCIO ANT+ cycle computer connects with Di2's control systems as well as other ANT+ sensors.

All PRO parts are born from the collaboration between riders and engineers. The names of professional rides on our products aren't a marketing gimmick - those riders have been involved in every step of the product development process. From concept to testing, they're involved every step of the way. They push our products to their outer limits, whether it's a stage-winning sprint, a downhill final or a 360 gap jump for the cameras. No matter how or where you ride, you can rely on PRO.

>Winners choose PRO. Whether it's Team Sky, Belkin, Orica-GreenEDGE, Argos-Shimano or FDJ on the road, Atherton Racing in the dirt or multisport athletes like Team Luna Chix or Craig Alexander, leading teams and riders rely on PRO components to deliver them to the finish line. From the cols of the Tour de France to the rocks of the World Cup DH circuit, both athlete and equipment have to be performing at 100% to take the win. That's why our relationship with our athletes is more than just sponsorship. We get the product insight and real-world test data that only professional riders competing at the highest level can provide, allowing us to make even better parts. And that means better equipment for you, too, whether you're seeking out your next hit of singletrack or tackling an epic day on the road.

OUR AMBASSADORS

//WORLD-WIDE **PARTNERS**

CO-CREATION

>PRO components are the result of a unique collaboration between professional riders and experienced engineers. The riders tell the engineers what attributes they need to succeed in their discipline – stiffness, weight, shape, dimensions adjustment. The engineers make those attributes a reality, using their design expertise and materials knowledge to deliver the desired characteristics. Prototypes are tested on the road or trail by the riders, and the feedback used to refine and improve the finished product. Every PRO component comes from the combined expertise of professional riders and leading engineers, and the results benefit every rider. We work with road, track, cyclocross and mountain bike riders, with different specialisms within those disciplines – sprinters, climbers, freeriders, XC racers, downhillers. Every pro rider has different needs, and the same is true of recreational or sports riders – you benefit from their experience.

PRO
POWERS YOUR
PERFORMANCE

STAR
SERIES

+++ Thomas VanderHam

STAR SERIES

>Our Star Series components are developed with the help of top athletes who rule their own discipline. Dan, Gee and Rachel Atherton dominate the world of downhill and enduro racing, with multiple championship titles between them. Legendary freerider Thomas Vanderham started appearing in MTB films at the age of 15 and excels at big mountain riding. All of them place extremely high demands on their equipment, looking for an ideal blend of high strength and low weight. Their contribution is much more than just a signature - Star Series parts are built to fulfil specific professional riders' unique needs. They get exactly the components they need, built using PRO's huge engineering and materials expertise. And you get professional-grade components designed by the best in the business. PRO makes the best of the best available to everyone, so that you can feel like a pro too.

GENERAL

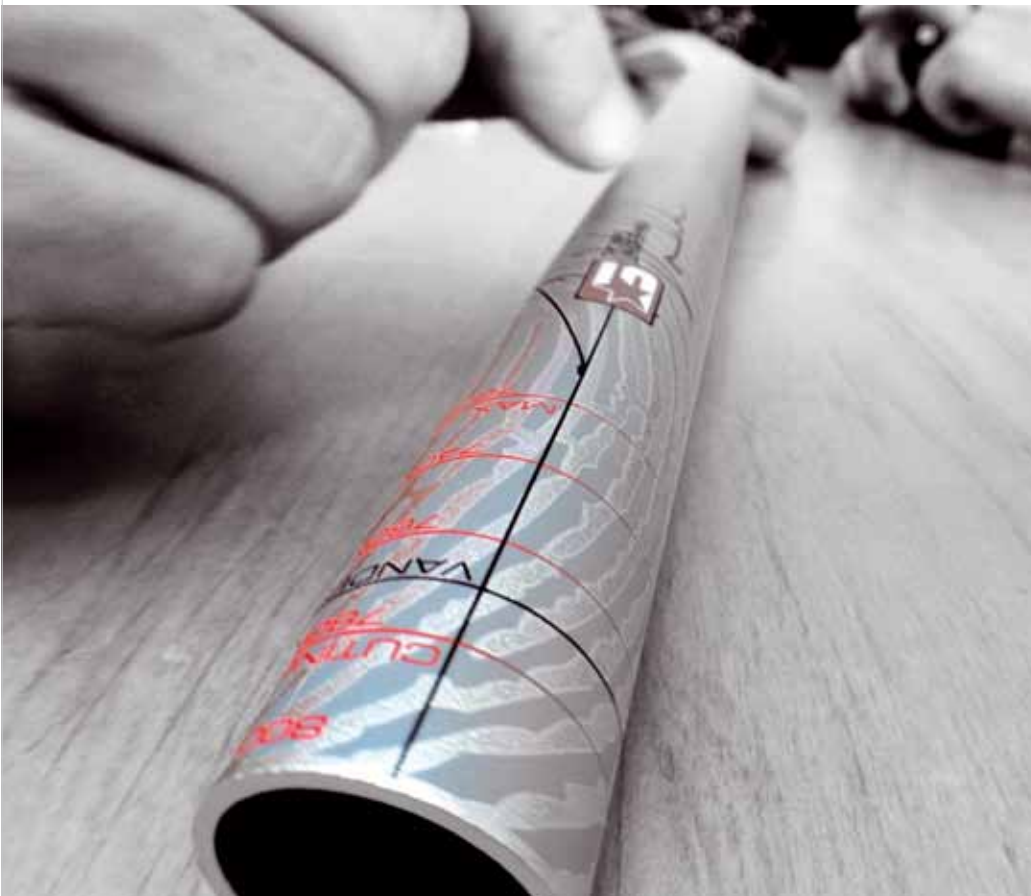

>Designing bike components is hard. Riders make contradictory demands on their equipment – strong yet light, stiff yet comfortable. And the exact balance between these attributes is different for every discipline. Fortunately, our engineers and research and development team thrive on a challenge. These are the kinds of problems that they love to solve, and they have the skills, expertise and resources to do so. From the first sketches on the drawing board, through feedback from professional athletes to prototypes and real-world testing, at PRO we know how to develop advanced components. Our unique collaborations with riders like Thomas Vanderham, the Athertons and road teams Sky, Belkin, Argos-Shimano, Orica-GreenEDGE and FDJ-fr help us to make our components better than ever. And the beauty of it is that every cyclist can reap the benefits.

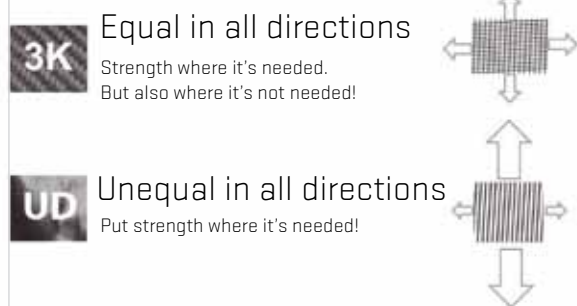

ALUMINUM

>Aluminum is the most-used material in the bicycle industry. There are over 300 different aluminum alloys available, all with different characteristics, but all have low density, allowing strong parts to be kept light. For bicycle components, 6000 and 7000 series aluminum is the most commonly used. These alloys combine aluminum with other elements – magnesium and silicon in 6000, zinc in 7000 – to increase their strength while remaining easy to work with. Aluminium can be shaped by swaging, bending, forging, casting or machining (or combinations of those processes) and joined by welding or bonding. Heat treating increases strength still further.

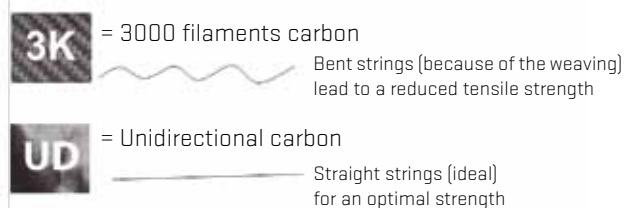

It's vital to choose the correct grade of aluminum for a particular component, and to use the appropriate processes to manufacture the part. The processes available dictate certain aspects of the shape, but there can be more design freedom with high-end alloys and advanced manufacturing processes.

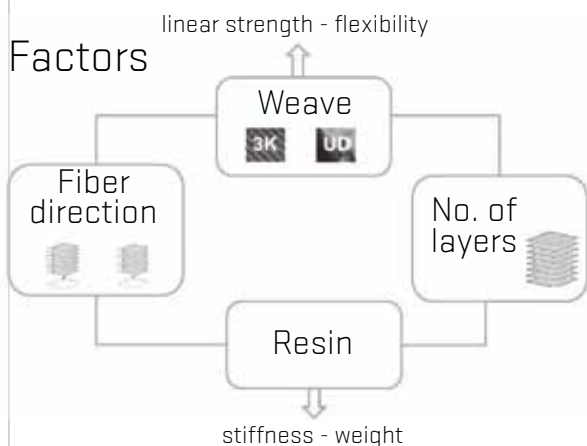

Strength

3K-UD comparison

Factors

CARBON

>Carbon fibre has revolutionised bicycle and component design. Its low weight, high strength and high degree of design freedom has brought carbon to a dominant position in the high end of the market. Seatposts, handlebars, stems, wheels, saddles. Nearly every part of a bike can be made wholly or partly from carbon fibre. But not all carbon fibre parts are created equal. There are many variables that govern the performance of a carbon part. There are many different grades of carbon fibre available, that may be laid up in an enormous variety of ways. The layers may be bonded together with different resins. There are a range of technologies for pressing the carbon and resin into a mould to yield the final shape. And the shape itself affects performance. For each individual component, the appropriate materials and lay-up must be chosen to deliver the desired performance characteristics.

SPREAD TOW CARBON

>The use of Spread Tow carbon in bicycle components is the result of our co-creation with Oxeon SA in Sweden, the patent holder of Textreme material. A carbon fibre tow is the bundle of carbon filaments that are woven into sheets. Textreme's Spread Tows are flat tapes rather than bundles, allowing the manufacture of thinner, lighter composite sheets. Using Textreme rather than conventional carbon fibre reinforcement yields weight savings of 20-30% without any sacrifice of strength or stiffness. Our components can be made stronger and stiffer for the same weight. Thinner sheets mean a greater ability to tune the ride feel of components. That makes Textreme the ultimate choice for making ultra light composite bicycle products. The application for bicycle products is obvious.

REINFORCED BY

TeXtreme

ENJOY LIGHTER PERFORMANCE

- Lighter, better, faster
- Top performance
- Perfect feel and control

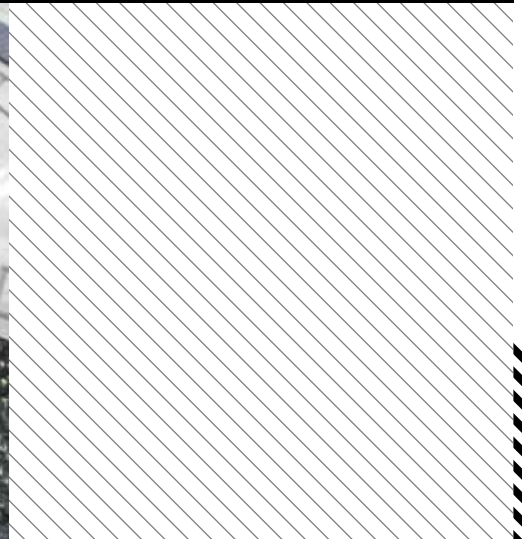

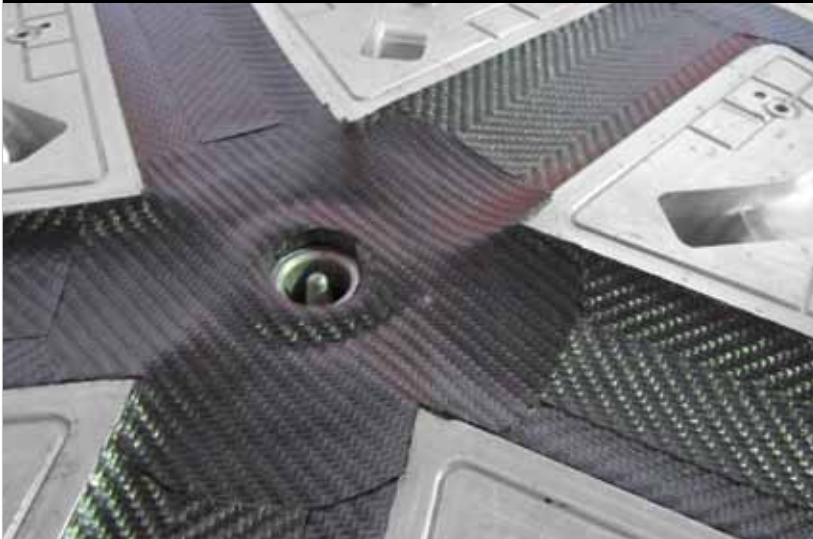

TeXtreme® carbon fabrics
(Spread Tow)

1 The Spread Tow structure makes it possible to achieve thinner laminates.

2 Straighter fibers with reduced crimp optimize and strengthen the composite.

3 Lower crimp reduce the amount of excess plastic, thereby minimizing weight.

Conventional carbon fabrics
(Regular tow)

ROAD COMPONENTS

>Professional riders from Team Sky, Belkin, Orica-GreenEDGE, Argos-Shimano and FDJ, fr rely on PRO components to deliver results. The best materials, cutting-edge engineering and real-world testing means that PRO equipment gives them an edge, whether sprinters, climbers or all-rounders. You can get that edge too, and you don't have to be a professional racer to feel the difference. PRO road components give you the perfect balance between strength, weight, stiffness, ergonomics and aerodynamics, with options for every riding style and budget.

VIBE SPRINT

>Sprinters are the powerhouses of the peloton. For the sprinter, it all comes down to the last kilometer. That's when huge forces are unleashed in the surge for the line. With winning margins measured in millimetres, every bit of power has to be harnessed and converted to speed. Our Vibe Sprint handlebar and stem are optimised for the dash to the finish. Incredibly stiff, Vibe Sprint parts ensure that no effort is wasted. And there's no excess weight either, because there's a long distance between the start line and the finish and you have to be in the pack to contest the sprint. Vibe Sprint components have won World Championships, classics and many stages in the Grand Tours. Built for the most demanding of cyclists, and available to you.

PRO://VIBE SPRINT STEM

+++++

- Full UD OS Carbon design for ultimate rigidity
- Special front clamp-design reduces stress on the bolts
- Ideally used with the Vibe Sprint handlebar for optimal rigidity and optics
- Extensions: 105, 120, 135mm
- Angle: -10°
- Diameter handlebar clamp: 31.8mm
- Suitable for 1-1/8" forks
- Colour: UD Carbon
- Weight: from 195g.

PRO://VIBE SPRINT HANDLEBAR

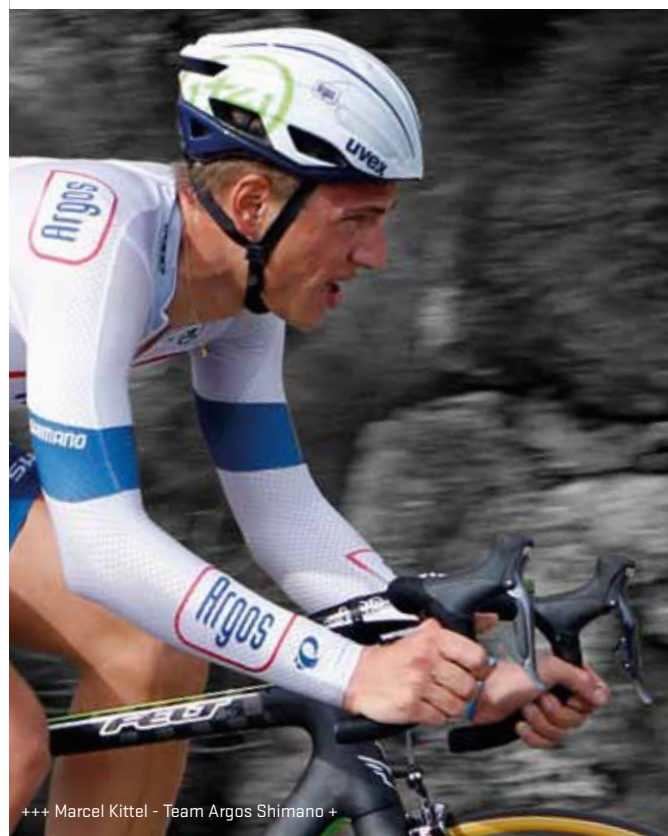

+++++

- Alloy 7050 material with internal reinforcement ribs for ultimate rigidity
- OS top-section with integrated dual cable routing
- Ideally used i.c.w. the matching Vibe Sprint stem for optimal rigidity and optics
- Sizes: 40, 42, and 44cm
- Diameter: 31.8mm
- Colour: SB Black
- Weight: from 295g.

STEALTH EVO

>Stealth Evo is all about integration. The one-piece carbon fibre bar and stem combination is lightweight yet extremely stiff and strong, as well as aerodynamic and of course great to look at. A great all-rounder, Stealth Evo excels for climbing, sprinting and descending. Stealth Evo is practical too. Need more space for a computer? Add the ultralight carbon fibre computer mount. Choose from classic black or cool white to match your bike. Stealth Evo: The choice of professionals, available to everyone.

PRO://STEALTH EVO STEM-BAR COMBO

- +++++
- Fully integrated UD Carbon stem-handlebar combination
- Integrated Dual Cable Routing
- Available in Anatomic and Compact bend-design
- Sizes: 40, 42 and 44cm [C/C]
- Extensions: 90-130mm
- Angle: -8°
- Suitable for 1-1/8" forks
- Colour: UD Carbon or Shiny White with Carbon windows
- Weight: from 410g.

VIBE

>The carbon fibre Vibe line-up offers something for everyone. Marcel Kittel has taken Vibe to the top step of the podium many times. You'll find Vibe parts in the pro peloton on the bikes of Sky, Belkin, Orica-GreenEDGE, Argos-Shimano and FDJ.fr. Built with feedback from top cyclists, Vibe components have unique features like the interlocking puzzle clamp on the stem or the seatpost that can hold a Di2 battery. Vibe parts are ready to excel in the world's toughest races. Light, stiff, stylish and durable

PRO://VIBE STEM

- Puzzleclamp system for optimized frontclamp fixation
- Triangular body for optimised weight vs rigidity ratio
- UD Carbon - Alloy 7000 series construction with titanium bolts
- Extensions: 80-140mm
- Angle: -10°
- Diameter handlebar clamp: 31.8mm
- Suitable for 1-1/8" forks
- Colour: UD Carbon
- Weight: from 115g.

PRO://VIBE SEATPOST

- Monocoque UD T800 carbon construction
- Multi adjustable saddle-clamp with titanium bolts
- Spec: 350mm long, 0mm offset
- Diameters: 27.2 & 31.6mm
- Compatible with internal DI2 battery SM-BTR2
- Weight: from 205g.

PRO:// **VIBE 7S**

>There's still a place for highly-developed aluminum components in the pro peloton. Vibe 7S components are made from high-grade 7000 series aluminum, allowing our engineers to produce bars, stems and seatposts that are stiff, light and durable. Vibe 7S delivers no-nonsense components with excellent performance under all conditions. Vibe 7S is more

affordable than Vibe, but it remains professional-level equipment - just ask the riders of Sky, Belkin, Orica-GreenEDGE, Argos-Shimano and FDJ.fr, who have used Vibe parts in the classics and the highest mountain stages in the Grand Tours.

PRO://TRACK

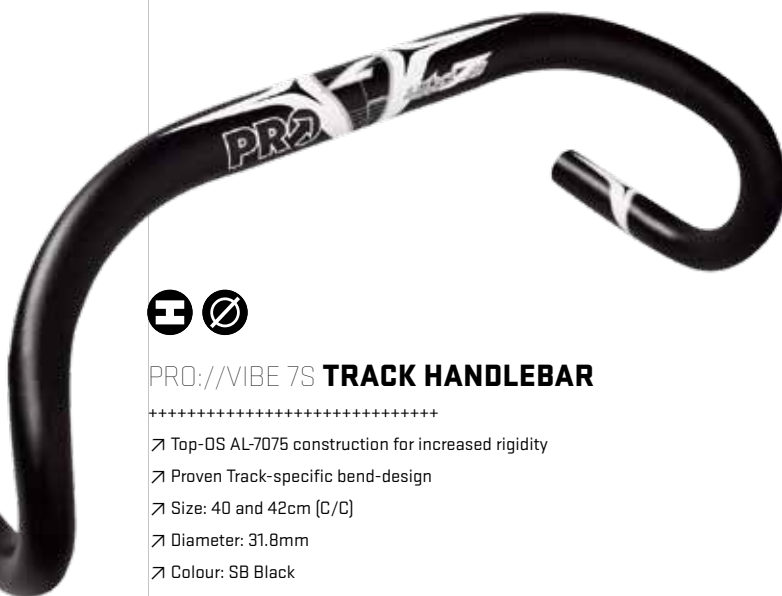

>The velodrome is a unique environment. This is cycle sport in its purest form. The smooth surface of the track means that the stiffness of components can be enhanced to harness every bit of power – comfort isn't an issue. PRO's specially-shaped track handlebar is available in a 7075 aluminum Vibe 7S version, extremely stiff. The Vibe Track stem continues the theme, with a full carbon fibre box-section monocoque construction for ultimate rigidity. These components have been developed, tested and raced by the world's best athletes, with PRO helping to win many medals at the Olympics and World Championships.

PRO://VIBE 7S STEM

+++++

- Puzzleclamp system for optimized frontclap fixation
- Reduced stress on bolts and handlebar because of frontcap design
- Triangular body for optimised weight vs rigidity ratio
- Alloy 7075 series construction
- Extensions: 80-140mm
- Angle: -10°
- Diameter handlebar clamp: 31.8mm
- Suitable for 1-1/8" forks
- Colour: SB Black
- Weight: from 120g.

PRO://VIBE 7S TRACK HANDLEBAR

>PRO mountain bike components push back boundaries so that you can do the same. In collaboration with some of the world's best riders, we've developed parts that meet the demands of the most extreme mountain bikers, with just the right combination of weight, durability, ergonomics and stiffness. Whether you choose to race cross-country, downhill or enduro or just ride for kicks, we have the right components for you. For full-bore cross-country racing, the ultralight XCR components will give you that all-important edge. If you seek adventure and new trails, the light yet robust Tharsis parts are for you. All-mountain riders will benefit from our sturdy Koryak components, with FRS offering the strength and stiffness that freeriders demand. The Star Series components from Atherton Racing and Thomas Vanderham are ready for the most extreme riding.

THARSIS SERIES

>Named after the 15km-high volcanoes of Mars, Tharsis is synonymous with long days in the mountains and the spirit of discovery and adventure. Tharsis components have the strength to tackle the most rugged terrain while retaining low weight - because you have to ride up the mountain before you can come back down. We offer the Tharsis line-up in high-strength aluminum alloy which has a distinctive and stylish graphical treatment so that Tharsis parts look as good as they perform.

PRO:// THARSIS **HANDLEBAR ALLOY**

PRO:// XCR SERIES

>PRO's XCR component series delivers what every fanatical cross-country mountain bike racer is looking for. Light, stiff and beautifully finished, with an eye for detail - see our unique Puzzle Clamp stem, that replaces two bolts with an interlocking face plate. XCR carbon fibre parts have extra strength where its needed, with excess weight shaved off wherever possible. The ideal blend of stiffness and low weight makes XCR the perfect choice for riders looking for no-compromise components for flat-out racing - like pro teams Giant Pro XC, Team Luna and Team Colnago.

KORYAK SERIES

>Koryak parts are named for the rugged mountains of Eastern Siberia. This hostile environment symbolises the goals of the Koryak series - all-mountain performance in all conditions. We've used the highest quality aluminium to achieve the ideal balance between strength and weight. Stylish black and white graphics mean that they look good too. Ready for adventure, Koryak components can take a pounding - explore with confidence.

PRO://KORYAK FLAT HANDLEBAR

- +++++
- Flat All Mountain handlebar
- Strong AL-2014-T6 DB construction
- Diameter: 31.8mm
- Size: 66cm / 5° backsweep
- Colour: SB Black
- Weight: 175g.

PRO://KORYAK RISER HANDLEBAR

- +++++
- All Mountain Riser handlebar
- Strong AL-7050-T6 DB construction
- Diameter: 31.8mm
- Size: 71cm / 25mm rise / 9° backsweep / 5° upsweep
- Colour: SB Black
- Weight 269g.

PRO://KORYAK GRIPS

+++++

- Slightly OS grip-surface for increased comfort, grip and control
- Easy assembly / removal by single Alloy lock-on ring
- Length: 130mm, Outer diameter 31mm
- Colour: White

PRO://KORYAK STEM

+++++

- 3D Forged All Mountain stem
- Strong AL-6061 T6 construction
- Angle 10°
- Extensions: 60-120mm
- Diameter handlebar clamp: 31.8mm
- Suitable for 1-1/8" forks
- Colour: SB Black
- Weight: from 140g.

PRO://KORYAK SEATPOST

+++++

- Durable 3D Forged AL-6061 T6 construction
- Innovative 1-bolt Wedge Clamping System
- 15mm off-set/0mm off-set
- Sizes: 27.2 x 400mm, 30.9 x 400mm and 31.6 x 400mm
- Colour SB Black
- Weight: from 285g.

PRO:// **FRS**

>Designed for the demands of freeride, the FRS series optimises stiffness and strength. Durability is the most important attribute for big moves in remote locations. If that's your kind of riding, you need to have confidence in your equipment, and FRS delivers with high-quality materials and PRO's engineering excellence. FRS components are ready for any terrain. Jumps, drops, rocks - FRS will tackle it all. And with stylish looks from a distinctive graphical treatment, FRS will appeal to other riders too. FRS is a component series that you can rely on.

PRO://FRS RISER **HANDLEBAR**

+++++

- Freeride Riser handlebar
- Wide bar constructed of AL-2014 T6 material
- Size: 80cm / 31.8mm
- Riser height: 20mm and 40mm
- Colour: SB Black or Shiny White
- Weight: 345g.

PRO://FRS **SEATPOST**

+++++

- AL6061 T6 Forged alloy seatpost with wide angle adjustment
- Freeride specific design
- Size: 27.2/30.9/31.6 x 350mm
- Colour: SB Black
- Weight: from 270g.

PRO://FRS **STEM**

ATHERTON RACING

//ENDURO **DOWNHILL**

>With multiple World Championship and World Cup downhill wins between them, Dan, Gee and Rachel Atherton are mountain biking's fastest family. They dominate the downhill and enduro circuit, constantly pushing themselves to ride harder and faster. Of course, they make extreme demands on their equipment, making our collaboration with them a real challenge for our designers. Strength and durability are of course essential, but race bikes need to be built as light as possible too. Dan, Gee and Rachel knew

exactly what they wanted and gave us very detailed feedback, testing prototypes as soon as they were available. Stylish, distinctive graphics completed the designs.

ATHERTON STAR SERIES

PRO://THE ATHERTONS STAR SERIES DH HANDLEBAR

+++++

- Wide DH competition handlebars with 20mm low profile rise
- Durable, strong and lightweight AL-7050-T76 DB Alloy
- Size: 80cm / 20mm rise / 5° upsweep / 9° backsweep
- Cutting indications from 780 to 720mm
- Reinforced construction at mid section
- Colour: SB Black
- Weight: 330g.

PRO://THE ATHERTONS STAR SERIES DH SEATPOST

+++++

- Downhill seatpost with 1-bolt clamping system
- Forged 7050 Alloy post
- Wide angle adjustment
- Specs.: 27.2 / 30.9 / 31.6 x 350mm
- Weight: 230g.

PRO://THE ATHERTONS STAR SERIES THREADLESS STEM

- Fully CNC machined threadless DH stem
- Strong and light Al7050 material
- Durable and strong 5mm Allen key bolts
- Angle: 0°
- Extension: 35, 50 & 65mm
- Diameter handlebar clamp: 31.8mm
- Suitable for 1-1/8" forks
- Colour: Matt Black
- Weight: from 150g.

PRO://THE ATHERTONS STAR SERIES DIRECT MOUNT STEM

- CNC machined Direct Mount stem
- Multiple mount positions; 45-50mm
- Strong and lightweight 7050 Alloy
- Compatible with FOX/RS crowns
- Colour: Matt Black
- Weight: 150g.

PRO://THE ATHERTONS STAR SERIES GRIPS

- Dual Density Kraton DH racing grips with Atherton-icon grip-profile
- Double lock-on with exclusive internal locking system
- Locking on inside, internal fixture on outer end
- Length: 135mm, Outer diameter: 30mm
- Colour: Black with White locking

PRO://THE ATHERTONS STAR SERIES RISER SET DIRECT MOUNT STEM

- Contains 3 and 5mm spacers
- Height adjustment 3, 5 or 8mm
- including bolts
- Colour: SB Black

PRO://THE ATHERTONS STAR SERIES SADDLE

- Microfiber cover with Kevlar reinforcements
- SUS316-Ti rails
- Super light weight and competition shaped padding
- Size: 260 x 130mm
- Weight: 195g.

THOMAS
VANDERHAM

[HTTP://PRO-BIKEGEAR.COM](http://PRO-BIKEGEAR.COM)

THOMAS VANDERHAM

// FREERIDER

>Legendary freerider Thomas Vanderham aims to keep the “mountain” in mountain biking. For Thomas, freeride is all about big moves on big mountains. Since appearing in his first MTB film at the age of 15, he’s been constantly promoting his favoured style of riding through spectacular video and photo work. Working on big moves in remote locations places extreme demands on components. Thomas trusts PRO to produce parts that can deal with the most extreme conditions, time and time again. Together we developed a Thomas-proof component series - anything that can hold up under his style of riding can definitely be relied upon. The Vanderham Star Series parts will help you push you limits.

+++ Thomas VanderHam +

VANDERHAM STAR SERIES

PRO://VANDERHAM STAR SERIES FR HANDLEBARS

TRIATHLON TIME TRIAL

>In the race against the clock, fractions of seconds count. That's where PRO's aero handlebars come in. Whether it's a time trial or a triathlon, PRO's long experience working with professional athletes mean that our aero bars set the standard. Fast and efficient for a short prologue or maximum performance over the Ironman distance, PRO has the solution for you. Our range includes clip-on aero extensions all the way through to integrated monococque carbon fibre bars that can be customised with millimeter precision. Every part has been extensively tested both in the wind tunnel and out on the road - ORICA-GreenEDGE used PRO parts to win the team time trial at the 2013 Tour de France. Beat the wind, beat the clock.

+++ Craig Alexander

MISSILE EVO

>The choice of professional time trial specialists, Missile Evo is the result of our desire to build the world's fastest aero handlebars. We worked with specialist riders across the world to develop the shape of the Missile Evo, with internal cable routing and a teardrop shape for minimum aerodynamic drag. Critically, Missile EVO bars feature excellent adjustability. Length, width, angles, extension, arm rest width and rise can all be customised for the perfect aero position. Missile EVO bars have been winning races since their introduction, and for 2014 the huge range of adjustability makes them better than ever.

+++ Team Orica GreenEdge

PRO://MISSILE EVO CARBON AEROBAR

+++++

- Full UD Carbon aerodynamic design that meets UCI requirements
- Wide adjustability of armpads and extensions for optimal ergonomic and aerodynamic position
- Integrated brake- and shift-cable routing (also for Shimano Di2)
- Ideally used i.c.w. the Missile Evo stem for optimal aerodynamics and optics
- Size: 400mm
- Diameter: 31.8mm
- Colour: Carbon
- Weight: 595g. (stem not included)

PRO://MISSILE EVO **BASEBAR**

+++++

- Full UD Carbon aerodynamic design that meets UCI requirements
- Perfectly to match with PRAB0017 Missile Evo clip-on
- Including 4 spacer adapters for "under bar" and "top bar" mount
- Integrated brake- and shift-cable routing (also for Shimano Di2)
- Ideally used i.c.w. the Missile Evo stem for optimal aerodynamics and optics
- Size: 400mm
- Diameter: 31.8mm
- Colour: Carbon
- Weight: 295g.

PRO://MISSILE EVO CARBON STEM

+++++

- Full UD Carbon aerodynamic design
- Integrated (Shimano Dura Ace Di2) shift-cable routing
- Developed for use with the Missile Evo aerobar for optimal aerodynamics and optics
- Diameter handlebar clamp 31,8mm.
- Extension: 85mm, angle -10°
- Weight: 295g.

PRO://MISSILE EVO **J-BAND EXT.**

+++++

- UD carbon oval shaped aerodynamic aerobar extensions
- For stretched wrist, low frontal area arm position
- 10 position holes, 5 degree inward and 12 degree upward tip
- Round 19,4mm inner diameter for Di2 or other shifting mechanism
- Colour: Carbon
- Weight: 142g.

PRO://MISSILE EVO **CLIP-ON**

+++++

- For "under bar" and "top bar" mount.
- Wide adjustability of armpads and extensions for optimal ergonomic and aerodynamic position
- Wide and 1cm thick Microfibre arm pads
- Diameter handlebar clamp 31,8mm.
- Colour: SB black & Carbon
- Weight: 400g.

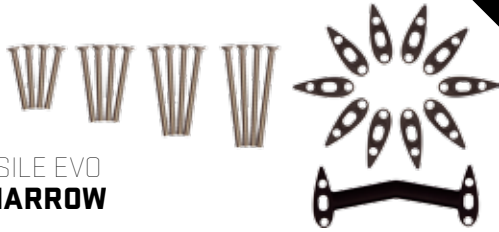

PRO://MISSILE EVO **SKI-BAND EXT.**

+++++

- UD carbon oval shaped aerodynamic aerobar extensions
- For neutral wrist and arm position
- 13 position holes, 8 degree inward and 45 degree upward tip
- Round 19,4mm end for Di2 or other shifting mechanism
- Colour: Carbon
- Weight: 142g.

PRO://MISSILE EVO BRIDGE NARROW

+++++

- Riser set including 10 x 1cm spacers and bridge for stability
- Including various bolt lengths
- Aluminum aerodynamic construction that meets UCI requirements
- For narrow setup only
- Colour: SB black
- Weight: from 30g.

PRO://MISSILE EVO BRIDGE WIDE

+++++

- Riser set including 10 x 1cm spacers and bridge for stability
- Including various bolt lengths
- Aluminum aerodynamic construction that meets UCI requirements
- For wide setup only
- Colour: SB black
- Weight: from 40g.

PRO://MISSILE EVO SPACER SET

+++++

- Spacer set including all the standard spacers that are in the Missile EVO aerobar
- Including various bolt lengths
- Original spare part
- Colour: SB black

PRO://MISSILE EVO CLIP-ON BRACKETS

+++++

- Aero brackets for Missile EVO components to mount on round 31.8 bars
- For "under bar" and "top bar" mount.
- Headlock construction
- Including stainless steel bolts
- Colour: SB black
- Weight: 144g.

PRO://MISSILE EVO LARGE ARMRESTS

+++++

- Large UD carbon multi position armrest
- Including Microfibre covered gel armpads, 1cm thick
- Inner and outer mount option
- 20mm side support
- Colour: Carbon
- Weight: 56g.

PRO://MISSILE EVO ARMRESTS

+++++

- Extra Large UD carbon multi position armrest
- Including Microfibre covered foam armpads, 1cm thick
- Inner and outer mount option
- Forearm ergonomic shape
- 25mm side support
- Colour: Carbon
- Weight: 90g.

PRO://MISSILE EVO XL ARMPADS

+++++

- Microfibre covered foam armpads, 1cm thick
- Velcro mount and 3M adhesive under velcro
- Debossed PRO logo
- Colour: Black
- Weight: 21g.

PRO://MISSILE EVO L ARMPADS

+++++

- Microfibre covered gel armpads, 1cm thick
- Velcro mount and 3M adhesive under velcro
- Debossed PRO logo
- Colour: Black
- Weight: 68g.

- Integrated brake-cable routing
- Suitable for all PRO clip-on bars
- Width: 40cm (C/C)
- Diameter: 31.8mm
- Colour: SB Black
- Weight: 295g.

PRO://SYNOPSIS ALLOY CLIP-ON

+++++

- Alloy S-bend shaped extension bars
- Fully Integrated Clamp System (FICS)
- Alloy armrests
- Including 5mm Gel-pads
- Diameter: 31.8mm (incl. shims for 26.0mm)
- Colour: SB Black
- Weight: 415g.

PRO://SYNOPSIS CARBON CLIP-ON

+++++

- Full carbon S-bend shaped extension bars
- Fully Integrated Clamp System (FICS)
- Full Carbon armrests
- Including 5mm Gel-pads
- Diameter: 31.8mm (incl. shims for 26.0mm)
- Colour: Carbon - SB Black
- Weight: 350g.

PRO://TEMPO CLIP-ON

+++++

- Aerodynamic 1-piece design
- Suitable for 31.8 and 26.0mm bars
- Adjustable armrests with anatomically shaped pads
- Colour: SB Black
- Weight: 385g.

PRO
POWERS YOUR PERFORMANCE

>Using our vast database of bike fitting data, we've designed a range of saddles to suit every rider.

Follow our simple seven-step process to choose your perfect saddle: 1: Identify your discipline 2: Select your gender 3: Choose the shape of your saddle. 4: Assess your flexibility. 5: Measure your sit bones and decide on a 132mm or a 142mm saddle for male or on a 142mm or a 152mm for female. 6: Select your rail. 7: Select your color.

Discipline, Gender, Saddle Shape, flexibility, anatomy, rail material and saddle color: Your route to a perfect fit.

DISC WHEELS

+++ Cameron Meyer - Team Orica GreenEdge +

>Whether time trialling on the road or racing against the clock on the track, aerodynamic wheels are a must. We turned to aerodynamicists from the world of Formula 1 motor racing to develop our air-cleaving full disc wheels. We also worked with professional riders, including Team Orica-GreenEdge, who used PRO wheels to win the team time trial at the 2013 Tour de France. With their help and our own engineering and materials expertise we've produced aero wheels without compromising weight or reliability. Our disc wheels are stiff laterally for power delivery, but less stiff vertically to avoid a harsh ride. For 2014, we've raised the bar for discs, with an 11-speed full disc rear wheel that weighs under 1kg.

PRO MERCHANDISING PROGRAM

INTRODUCTION

>The PRO Merchandising Program offers effective solutions for presenting PRO products. It has been designed to create a unified exposure and guide consumers around the store. The merchandising tools can be divided into different categories and presentation methods that help you in simplifying PRO's in-store presentation and maximize the impact on sales and profitability. Here a selection of PRO displays and merchandising tools is presented. For more information and details, please refer to the Merchandising Manual or contact your national PRO distributor.

PRO SINS

The PRO shop-in-shop (SinS) offers you the possibility to show PRO products in the best way. It is a very efficient display in a category management setting. The branding on top of the display is changeable, so it is possible to show other brands as well in combination with PRO. Besides this, sports marketing images can be posted in these frames to get the right PRO experience in the store. The SinS system can be used in a 1, 2 and 3 meters or a multiple compilation and can be equipped with grid wall or slat wall panels. It is also possible to use PRO current uprights and gridwalls to 'renew' the SinS. All SinS are equipped with LED lighting.

COUNTER DISPLAY

The PRO counter display draws attention to PRO's core products; handlebar, stem and seatpost. It can be used with or without the included poster-holder. The display is designed for use on a counter, but it also fits into a standard slat wall system to highlight the PRO products in combination with other brands.

PRO CUBE

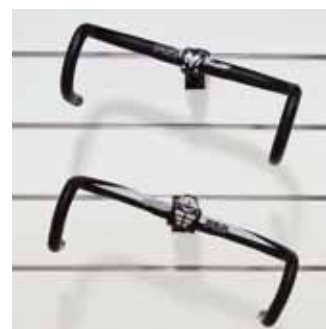

The PRO cube is a very convenient tool to use in every store. It is branded on five sides with the PRO logo.

HOOK SET PILLAR DISPLAY

As the hooks that are used on the Pillar display can also be separately used on a slatwall, it is possible to order these as a set. Each set contains 4 hooks for PRO accessories, 4 hooks for wheels and 4 hooks for handlebars.

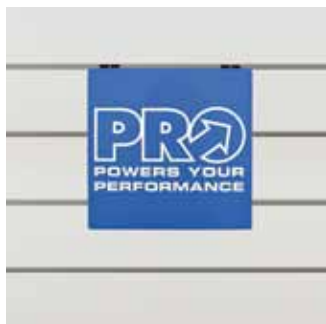

PILLAR DISPLAY

The PRO pillar display is a multi useable floor unit with different kinds of hooks to display PRO items like wheels and handlebars. It is the only freestanding PRO display and it provides an excellent way to highlight PRO items while at the same time it does not take much space. The display is two sided and can be expanded with banners. This ensures an optimal PRO brand experience and makes this display a real eye catcher.

WHEEL HOOKS

To display PRO wheels, flexible wheel hooks for slat walls and grid walls can be used. Each wheel hook can accommodate two wheels and has the possibility to put additional sales and price information on the front of the wheel hook.

CATEGORY MANAGEMENT TOOLS

To create a dedicated PRO area in a shop, retailers can use the different branding signs and dividers. These tools can be used on slat walls and are very flexible in usage. They give the store the sort of look and feel that unmistakably projects the image for performance and quality that consumers have come to expect from PRO.
